

CYBER SECURITY  
BUSINESS CONTINUITY  
DIGITAL FORENSICS

All information technology systems, especially computers and networks, particularly those with intranet or internet access, are prone to a regular stream of cyber-attacks which compromises their security. This makes them vulnerable to incoming viruses and other malware, which can access or modify sensitive company data as well as stealing passwords, and providing unauthorised remote access.

Many companies, large and small, fail to protect their corporate assets by not sufficiently protecting their presence in the digital world or by not having a tried and tested business continuity plan in place. They also often fail to back-up their computer data regularly and to more than one location.

*Why not call us for an exploratory chat to see how we can help you, totally without any obligation or pressure.*

enquiries@camtekcsi.com | www.camtekcsi.com

Clients receive a dedicated UK telephone helpline number and contact name.

Camtek CSI operates mainly in London and the South East, but also takes referrals from the UK nationwide and Europe. Our technical staff are professional engineers who work to the highest degree of integrity and follow the codes of conduct of the Institution of Engineering & Technology and the British Computer Society.

Our core services are aimed at small to medium sized enterprises and our forensic services are also offered to government departments and law enforcement agencies.

## flexible and cost effective solutions aimed at small to medium sized enterprises

### BUSINESS CONTINUITY

Major events can happen to put your business and its profitability in jeopardy.

This is why it is necessary to develop a business continuity and disaster recovery plan.

Camtek CSI can help with both in the form of direct consultancy or alternatively, through our training courses and workshops.

### CYBER SECURITY

Camtek CSI helps secure computers and networks to make business operations safer and more resilient, to both outside and inside attack.

Removing viruses and other malware, retrieving lost data, and providing back-up services is part of what we can offer your company.

### TRAINING

We provide specialist training workshops on business continuity theory and practice, cloud computing and data protection. Courses are usually presented in London but can also be held at the client's company.

### DIGITAL FORENSICS

If a criminal or malicious employee stole data from your organisation, or altered your records, would you company have the skills to detect it? We offer several forms of digital forensic resources, as well as help with forensic readiness planning.

### DATA BACKUP TO A UK DATA CENTRE

To help with disaster recovery data should be regularly backed up and a copy held in more than one location. We can show you how to do this and with a system that actually checks your data to ensure that it can be restored promptly and accurately.

## BUSINESS CONTINUITY

### SUPPORT

- Business impact analysis.
- Threat analysis and risk assessment.
- Continuity and recovery strategy.
- BCP review and testing.
- Addendums to staff contracts to cover computer law.
